## Detailed Features

### A Closer Look

## Features

- **Contact Management**  
Scan your business cards into our contact management software, which extracts all the contact information and puts it into a database you can use easily.
- **Sync**  
Directly synchronize your data with Outlook, Outlook Express, Pocket PC contacts and Palm contacts!
- **Export to other databases**  
You can export your data into Access/Excel/CSV/vCard ...
- **Note and Categories**  
Add note to a single card and no more scribbling on the back of cards. Simply drag and drop the data to organize your contacts by the default categories or create your own.
- **Editing Tool**  
Drag and drop to turn image into text instantly. You can change the contrast of the scanned images, and you can skew the images. Even for vertical text. Scan Drivers Licenses, Insurance Cards, and Receipts In addition to its great business card recognition, you can also use it to scan driver licenses, credit cards and receipts all on the same scanner and use our software to manager them. When you scan a drivers license, our software will recognize the name and the address on the license. For each entry in our software, you can scan 3 images. For example, both sides of a business card and a drivers license; business card, drivers license and credit card; .....
- **Continuous Scanning**  
The scanner enters into continuous scanning mode when you scan any card. When you finish with one card, as long as you insert another card within 10 seconds, the scanner will automatically start to scan the next card.
- **Double-Side Scanning**  
Two-sided business cards can be scanned (double-pass) with images in a single record. Continuous scanning makes the scanning more quickly.
- **User Defined Field**  
WorldCard allows you to self-define a new field that is not preset in the system, so as to expand the recognition capability. Add a new field and setup the recognition labels for this field, later when cards are scanned, information that match to the recognition labels will be extracted to the new self-defined filed.
- **Easy-to-Use: One Button Operation**  
It's as easy as pie to use WorldCard. All you have to do is to press the "Scan" button on the scanner, it will automatically perform the all process from scanning to recognizing the cards.
- **Highly Integration**  
PenPower WorldCard is fully integrated with Outlook, Outlook Express, Access, Palm, ACT!, Organizer, CSV file format and many more.
- **Multilingual Support**  
Recognize business cards in 15 different languages. The default language is English.

PenPower WorldCard supports English, Spanish, German, French, Italian, Chinese and others. Business cards in those languages can be read accurately.

- **Intelligent Card Search**

Just type the keywords of anything about a contact like name, company, business cards that match the criteria will be found instantly. The right contact information can also easily found by categories.

- **Printing**

PenPower WorldCard gives you lots of options to print your contact information to carry with you. The default label templates allow you to print labels in minutes, or you can create your own. You can also use Microsoft Word to print labels by importing data in office address book.

- **Multiple Viewing Modes**

The multiple viewing modes allow you to choose your favorite mode to view your contact database.

- **Import and Export**

You can import or export the contact database from or to different applications like Outlook, Outlook Express, Excel, ACT!, ACT! Premium for Workgroup, GoldMine, Lotus Organizer, and many more. This saves you a lot of time and no more repeated typing exists.

- **Portable Database**

You can sync all your contacts in a USB flash drive. Then you can look up all your contacts on any PC without install any software. (USB flash drives are sold separately)

- **Beam Your Addresses to Your Cell phone**
