

Recruitment agencies simplify administration with EazyID and DIGIPASS

EazyID is a digital identity with which temporary employees can log on to the portal site of the recruitment agency that employs them. EazyID allows timesheets and employment contracts to be filled in and signed online. This digital signature can have the same legal value as a manual signature. EazyID hence simplifies and reduces the employee's and the agencies' administration process.

EAZYID: SAY GOODBYE TO MULTIPLE ONLINE REGISTRATION PROCEDURES

More and more people purchase products and services online. Until now, users had to create a different online account for each online service provider.

People frequently purchasing goods or conducting transactions online, are confronted with a multitude of username-password combinations. Consequently, the demand for a simple, unequivocal and secure registration method has increased. The Dutch company DigiNotar therefore developed a unique concept: EazyID.

EazyID is an initiative aiming to set up a national authentication platform for the consumer in collaboration with renowned companies. Instead of having to register oneself for each site separately, the consumer now receives one access key, his EazyID, to log on to different websites. Moreover, EazyID also guarantees more privacy regarding the consumer's personal details as they are managed by the user himself. Accordingly, each website is provided only with that information effectively required to complete the transaction.

ELECTRONIC SIGNATURE SIMPLIFIES ADMINISTRATION

The EazyID concept offers innumerable possibilities and applications. Especially for recruitment agencies, EazyID can play an important role in the simplification of the administrative process.

Temporary employees frequently work on a weekly or even hourly contract basis and each contract and associated timesheet must be signed by the employee and returned to the agency. However, in practice this isn't always such a simple feat. Temporary employees must take the agency's working hours into account. Moreover, not every employee is able to reach the agency in order to hand in the original, signed documents. The recruitment agencies on their part, need to invest a lot of time and energy into collecting, classifying and checking these documents.

With EazyID, the employee is able to log on to the site of the recruitment agency, allowing him to manage his personal files and details. He can fill in his timesheets and sign his contract online. This electronic signature has

the same legal value as that of a manual signature.

The concept offers numerous benefits: the administrative follow-up is significantly simplified. The agency no longer needs to print, copy, send and archive its documents manually. The whole process can be digitalized reducing costs and increasing efficiency. Recruitment consultants are able to check the files of their clients online and no longer need to look up and link the documents manually to the corresponding file. Moreover, the system allows them to be notified whenever a contract is due to expire or comes up for renewal. Follow-up of the customers becomes a breeze. The temporary employees only need their EazyID and a computer with an internet browser to be able to log on to the website. They no longer need to present themselves physically at the agency or take working hours into account.

SECURELY EXCHANGE YOUR DOCUMENTS ONLINE WITH DOCPROOF

It is evident that security is a top priority when exchanging sensitive and confidential information such as employment contracts and electronic payment slips. Enterprises often believe that securing sensitive information comes at a high price. However, recruitment agencies need not invest in hardware, server capacity and man hours. DigiNotar created DocProof, a web based service for exchanging and signing documents online. EazyID is fully integrated into DocProof.

DigiNotar acts as Internet Trust Service provider and independent third party guaranteeing the integrity of the information exchange.

DocProof allows several parties to exchange information. The temporary employee and the recruitment agency can thus exchange, download and sign information online.

DocProof supports all types of documents and formats and can be incorporated into existing document management systems. All documents, information and signatures are archived for (a minimum) of seven years. Every single action is traceable. This allows recruitment agencies to legally prove which documents have been read and signed by whom and when.

DocProof's web based service is very user-friendly. First, the agency registers with DigiNotar and can then subsequently register its employees. Documents are uploaded to the DocProof environment and linked to the users concerned. The employee will receive an e-mail notification each time a new document has been uploaded.

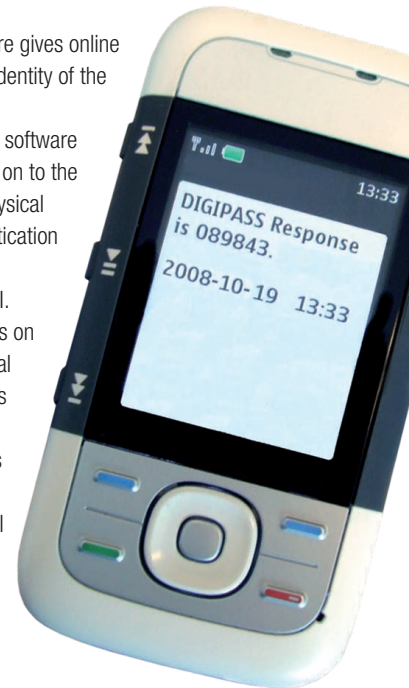

EAZYID AND DIGIPASS

EazyID uses VASCO's patented DIGIPASS authentication technology. DIGIPASS generates One-Time passwords allowing EazyID users to log on to the site of their online service provider. By replacing static passwords with strong dynamic passwords, hacking is made virtually impossible. Fraudsters need to operate in real time as the passwords can only be used once and expire after 32 seconds. Hackers can thus no longer store username and password combinations for batch processing.

Moreover, this authentication procedure gives online service providers certainty about the identity of the user.

DIGIPASS exists in both hardware and software format. Temporary employees can log on to the agency's website by either using a physical DIGIPASS device or via mobile authentication through text messaging.

DIGIPASS technology does not use PKI. Users do not need to install certificates on their computer to be able to sign digital documents. All authentication requests are handled through the server by the authentication software VACMAN. This means that neither the consultant nor the employee need to install additional software to be able to use EazyID. EazyID is therefore a true mobile solution that can be used anytime.

DigiNotar
Internet Trust Services

About DigiNotar

For ten years, DigiNotar has acted as an independent services trust provider in the Netherlands, offering solutions for identification, safekeeping and proof when using the Internet. Since November 2003 DigiNotar is registered with the OPTA as a supplier of qualified certificates in accordance with the law on the electronic signature. In May 2004 DigiNotar has been certified in accordance with the diagram TTP.NL against the ETSI 101 456 standard and was included in the Dutch government's PKI program.

About VASCO

VASCO designs, develops, markets and supports patented DIGIPASS®, DIGIPASS PLUS®, VACMAN®, IDENTIKEY® and aXs GUARD® authentication products for the financial world, remote access, e-business and e-commerce. With tens of millions of products sold, VASCO has established itself as the world leader in Strong User Authentication for e-Banking and Enterprise Security for blue-chip corporations and governments worldwide.
