

Identikey Server 3.0

Strong User Authentication for Software as a Service

**DIGIPASS
BY VASCO**

The adoption of Software as a Service (SaaS) for business applications delivers a wealth of benefits to companies of all sizes.

Eliminate significant software and infrastructure investments, and effectively reduce your total cost. Complex licensing and maintenance fees can be replaced with a low monthly payment. The internet provides the flexibility to roll out new applications efficiently. Security is the biggest concern of On-Demand Applications and VASCO offers the solution.

EMERGING TREND: SaaS

The installation of traditional software on every individual computer is very labor intensive. The endless maintenance costs are another major disadvantage. These include renewal of user licenses, keeping up-to-date versions, hardware and OS compatibility issues, etc.

With the increased performance, availability and stability of the current Internet infrastructure, other software deployments have become possible, such as Hosted Applications. Better known as "SaaS" or "On-Demand Applications," the software in this model resides on a server accessible over the Internet. The application is offered as a service by the SaaS provider and runs in the user's internet browser, usually with minimal requirements for the user's platform.

SaaS IS BOOMING

All market reports indicate strong growth for On-Demand Applications. With an adoption rate of over 15% in Enterprises and an expected annual growth of 33%, the message is clear: SaaS is booming. And not only in the U.S.,

where companies experience double the utilization rate of European firms, but also in Asia, where typically the market lags 12 months behind, SaaS is rapidly catching up.

AN ONLINE APPLICATION FOR EVERY MARKET SEGMENT

Market reports show the highest adoption rates are for CRM, HR and Collaboration applications. In general, SaaS is becoming increasingly popular in a wide variety of vertical markets:

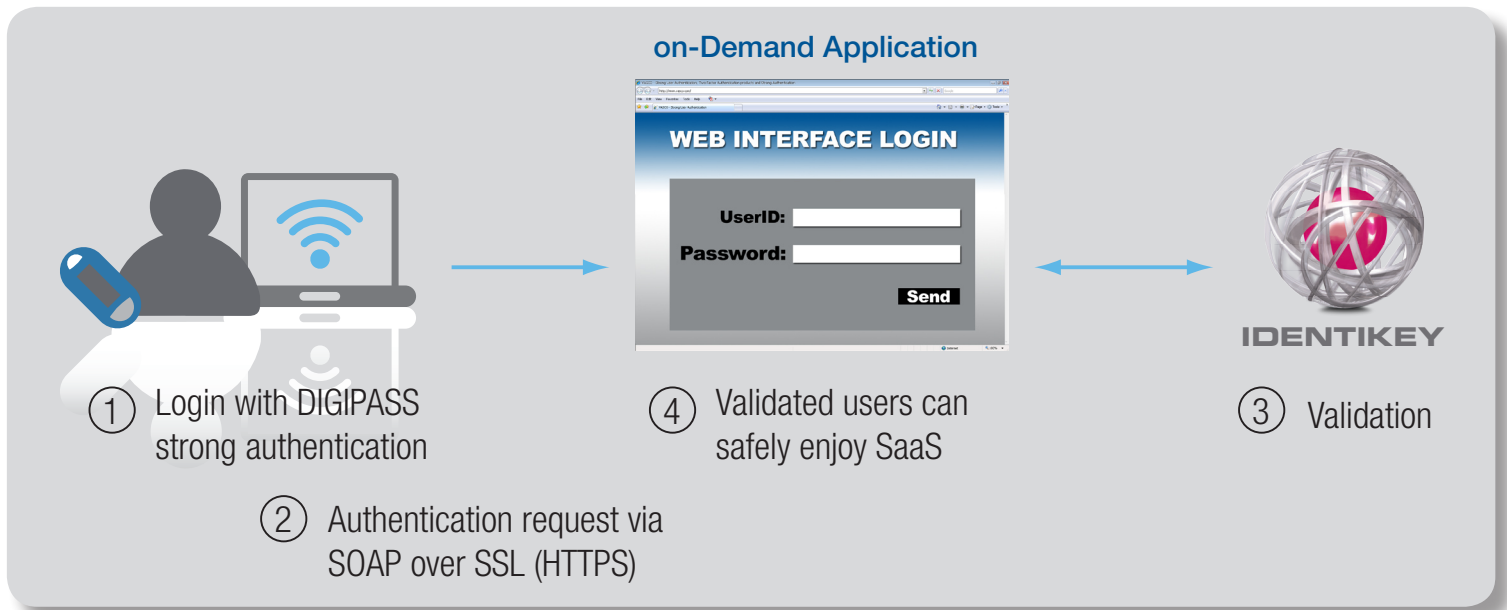

On-Demand CRM and ERP, Online accounting and financial administration, corporate tax services, Workforce Management Products, On-Demand HR and Payroll Services, Healthcare, Pharmaceutical, Medical, On-Demand Software for Public Relations Management, etc.

SECURITY IS KEY

The major concern for companies thinking about switching to online software is security. By now we know how to protect our car, our house, the corporate network... but how do we protect our account on an Internet-based application? Is our sensitive information safe in the hands of a third party? Is our confidential data accessible to authorized users only? VASCO's DIGIPASS technology eliminates these security concerns with an increased level of security.

IDENTIKEY SERVER AND SaaS

By replacing insecure static passwords with a dynamic, time-limited One-Time Password, VASCO's Identikey raises application security to a higher level. Sensitive information is only available to authorized users after they have proven their identity. Data theft and sharing of accounts is no longer possible. Identikey Server is an authentication solution that can be linked to every web-based application via SOAP. As the perfect security add-on for any SaaS, Identikey is highly recommended for every enterprise considering Online Applications.

PROTECT YOUR COMPLETE ENTERPRISE WITH VASCO'S SOLUTION

Besides protecting your internet applications, Identikey Server 3.0 offers various extensions to secure remote access of your employees to the corporate network and its resources. Home workers, remote branch offices, traveling staff and road warriors can use the same DIGIPASS technology to safely connect through Firewall VPN, SSL-VPN or any other RADIUS equipment to the enterprise LAN and access internal servers, data storage and printers.

Also company portals, Outlook Web Access email and Citrix Web Interface applications can be protected with strong user authentication at the same time.

Eliminate unauthorized access to confidential and sensitive information on your corporate network with VASCO's solutions.

More information on the Identikey solution is available at www.identikey.com
