

Identikey Server 3.0

Strong User Authentication for Software as a Service

The adoption of Software as a Service (SaaS) for business applications has many benefits to companies of all sizes. An attractively priced on-line solution can replace costly investments, but not without the security risks associated with the internet.

VASCO responds to these concerns with its latest security solution: Identikey with DIGIPASS authentication.

Integrators and Service Providers can work with VASCO to address new opportunities in Application Security.

EMERGING TREND: SaaS

The installation of traditional software on every individual computer is very labor intensive. The endless maintenance costs including renewal of user licenses, keeping up-to-date versions, hardware and OS compatibility issues, etc. are a major disadvantage.

With the increased performance, availability and stability of the current Internet infrastructure, other software deployments have become possible, such as Hosted Applications. Better known as "SaaS" or "On-Demand Applications," the software resides on a server accessible over the Internet. The application is offered as a service by the SaaS provider and runs in the user's internet browser, usually with minimal platform requirements.

AN ONLINE APPLICATION FOR EVERY MARKET SEGMENT

Market reports indicate the highest adoption rates for CRM, HR and Collaboration applications. In general, SaaS is becoming increasingly popular in a wide variety of vertical markets:

On-Demand CRM and ERP, Online accounting and financial administration, corporate tax services, Workforce

Management Products, On-Demand HR and Payroll Services, Healthcare, Pharmaceutical, Medical, On-Demand Software for Public Relations Management, etc.

SECURITY IS KEY

The major concern for companies thinking about switching to online software is security. By now we know how to protect our car, our house, the corporate network... but how do we protect our account on an Internet-based application? Is our sensitive information safe in the hands of a third party? Is our confidential data accessible to authorized users only? VASCO's DIGIPASS technology eliminates these security concerns with an increased level of security.

IDENTIKEY SERVER AND SaaS

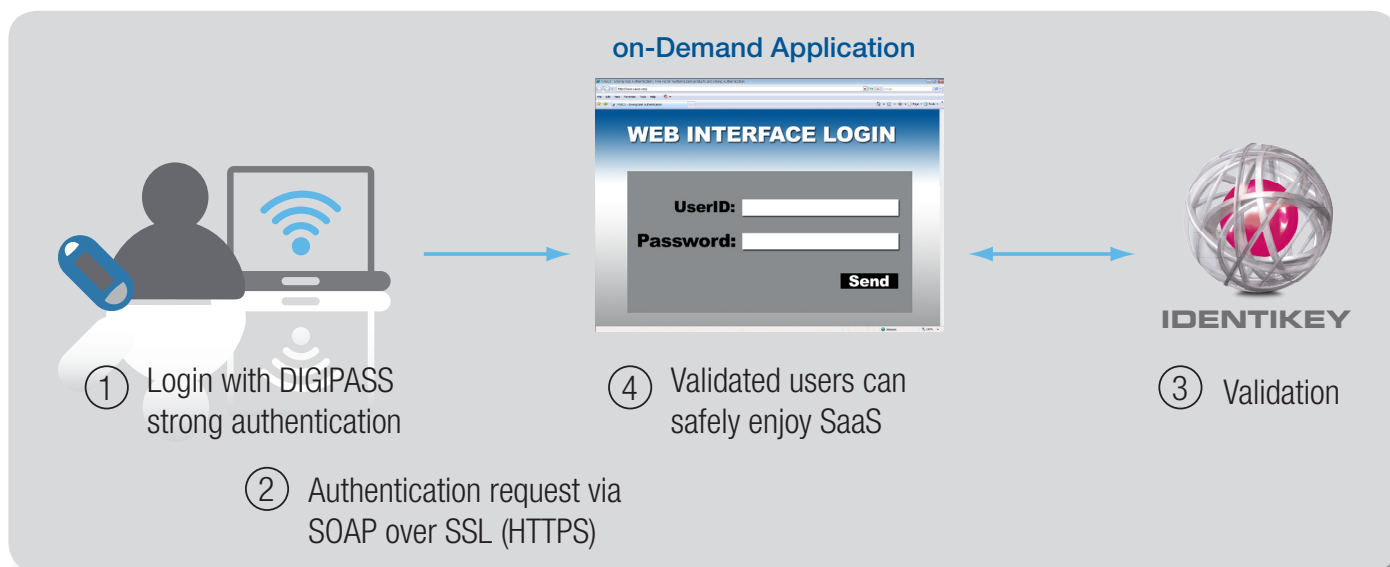

By replacing insecure static passwords with a dynamic, time-limited One-Time Password, VASCO's Identikey raises application security to a higher level. Sensitive information is only available to authorized users after they have proven their identity. Data theft and sharing of accounts is no longer possible. Identikey Server is an authentication solution that can be linked to every web-based application via SOAP. As the perfect security add-on for any SaaS, Identikey is highly recommended for every enterprise considering Online Applications.

NEW OPPORTUNITIES FOR SERVICE PROVIDERS

Identikey was designed with web functionality in mind. Several features are available to support this vision, and all functions are accessible through a web browser. Identikey can be easily integrated with Internet applications via SOAP. It also uses a web based administration interface and reports user activity in HTML or XML format.

Identikey Server is tailored toward providers of managed services and outsourced management. Identikey can be hosted at the IT partner where it can be offered as an authentication service.

The web-based focus and integration possibilities create unlimited business opportunities.

IDENTIKEY INTEGRATION PROGRAM

The Identikey Integration Program is a commercial package that qualifies customers and integrators as authorized Identikey Integration Partners. As part of the total Identikey solution, it is ideal for customers who wish to take full advantage of the software. Certified System Integrators can provide software integration as an exclusive service.

The Identikey Integration Program includes Product Training on Identikey Server 3.x and the SOAP SDK. A 5-user Identikey software license is also included for the partner's internal use and demonstration purposes.

More information on the Identikey solution is available at www.identikey.com
